## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 2, and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Barry et al. (US 5911710; hereafter Barry).

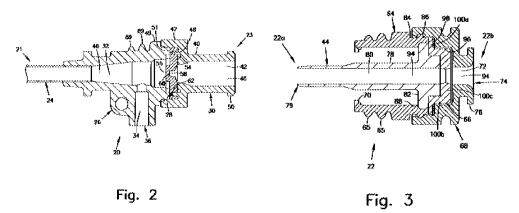

Fig. 1

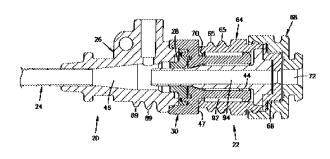

Fig. 4

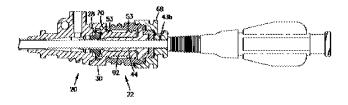

Fig. 7

Application/Control Number: 10/614,549 Page 4

Art Unit: 3763

The cited patent shows in figures 1-4 and 7, the steps of:

 providing a vascular access device having a device lumen and a safety valve on the proximal end thereof (Fig. 2);

- introducing the vascular access device into the body with the distal end of the device lumen being positioned within a vasculature of the body<sup>1</sup>;
- attaching a detachable hemostasis valve to the safety valve to open the safety valve (Fig. 1); and
- inserting a device through the hemostasis valve, open safety valve and device lumen (Fig. 7).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

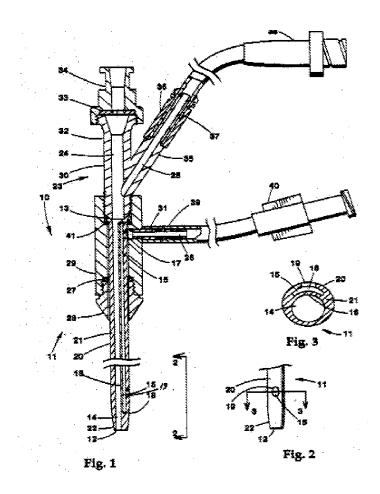

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

<u>Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Barry in view of Melker et al. (US 5,250,038; hereafter Melker)</u>. The Barry patent does not disclose a vascular access device having multiple lumens. However, such design would have been considered conventional in the art as evidenced by the teachings of Melker.

<sup>&</sup>lt;sup>1</sup> In Column 3, lines 62-67, the specification states "[t]he distal end of the sheath tube 24 is adapted for insertion into a patient's artery (not shown). Thus, when sheath tube 24 is inserted into an artery of a patient, fluid communication is established between a patient's bloodstream and the interior passageway 32 of the sheath hub 26".

Application/Control Number: 10/614,549

Art Unit: 3763

The Melker patent shows in figure 1, a multiple lumen vascular introducer sheath (29). Based on the teachings of the Melker patent, for a person of ordinary skill in the art, modifying the vascular access device disclosed by Barry, with a vascular access device having multiple infusion lumens, as taught by Melker, would have been considered obvious in view of the proven conventionality of this particular cannula design, and moreover, because such modification would have improved the capabilities of the access device by permitting simultaneous insertion of medical instruments into the body and infusion of fluids.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel A. Mendez whose telephone number is 571-272-4962. The examiner can normally be reached on 0730-1800 hrs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mr. Nicholas D. Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
